

- The Society of Biology logo embodies the concept of the crucible for life on earth, emphasising the intertwined strands of biology.
- Different approaches and levels of understanding (molecular, cellular, organisational and environmental) are interconnected to facilitate our understanding of biology.
- The interactions and intertwining of strands reflects the full spectrum of influences on biology - from the DNA helix to divergent paths of evolution and organism development and environment.
- The colours green, white and blue reflect the biology of earth, air and water.
